# ABOUT ROTOR CLIP

Rotor Clip is a globally recognized manufacturer of high-quality wave springs, retaining rings, spiral rings, and hose clamps. Founded in 1957 by Robert Slass with a 2,000 square-foot plant in Farmingdale, New York, Rotor Clip has grown to include a 238,000 square-foot headquarters and production facility in Somerset, New Jersey. Companies across a broad range of industries rely on Rotor Clip products, value-added services and expertise to build reliable and safe equipment.

Our skilled staff is committed to continuous innovation and process improvements to help customers meet their production goals. That includes applying their expertise directly with customers to solve difficult problems and ensure they receive the highest-quality, highest-performing products. Throughout the years, Rotor Clip has received numerous quality awards from major OEMs, manufacturers and distributors.

**Rotor Clip Headquarters, Somerset NJ, USA**

## QUALITY PRODUCTS THAT MEET BUDGET TARGETS

Our wave springs, retaining rings, and hose clamps are produced solely in the U.S. and Europe in a finely tuned, vertically integrated and lean manufacturing environment that provides for tight controls on quality, lead times, and costs.

With locations across Europe, United States and Asia, Rotor Clip maintains consistent global supply with regional support close to our customers.

### OUR CERTIFICATIONS

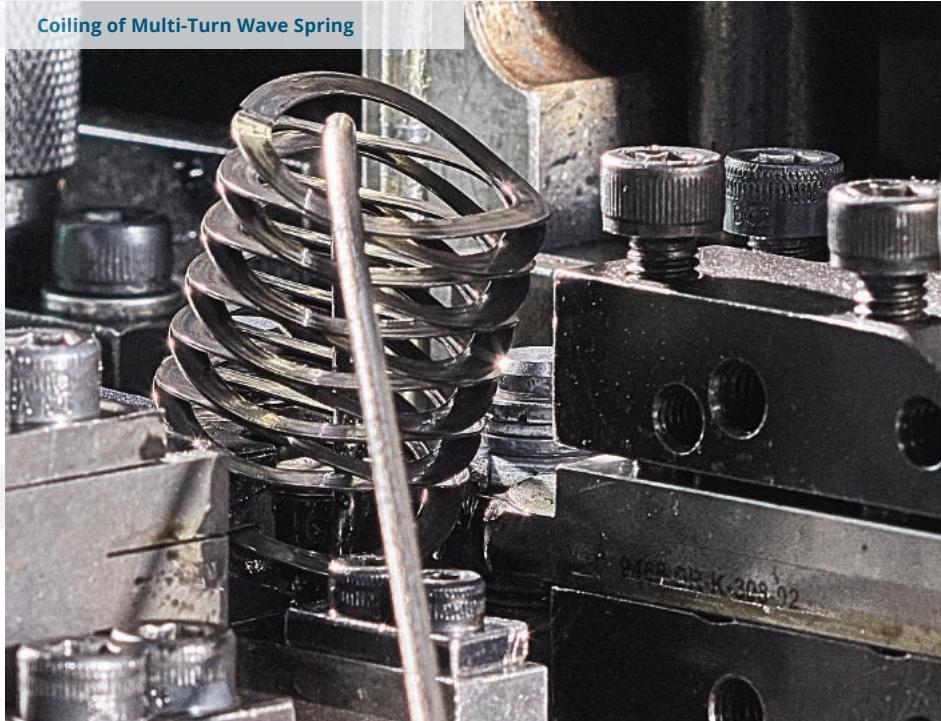

### OUR WORLDWIDE LOCATIONS

- Somerset - NJ, United States  
(Manufacturing Plant - North America)
- Budyně nad Ohří, Czech Republic  
(Manufacturing Plant - Europe)
- Sheffield, United Kingdom
- Idstein, Germany

# WAVE SPRINGS - the engineering advantage

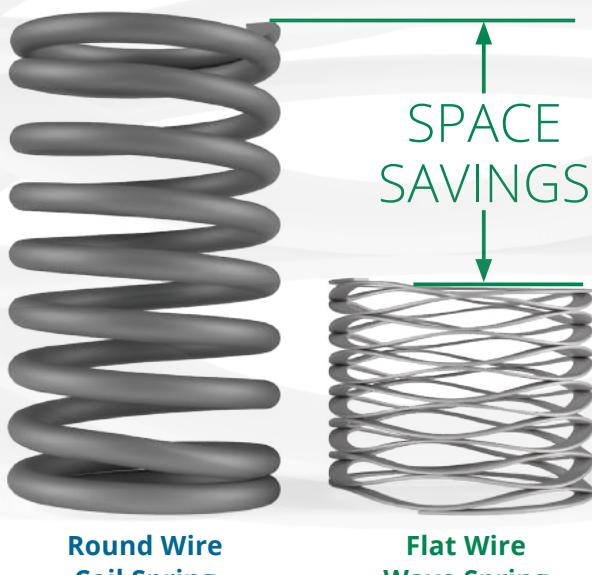

## Why settle for ordinary springs when wave springs offer optimal force handling, space savings and performance?

Our single-turn and multi-turn wave springs are made from coiled flat or round wire with waves added to give them a spring effect. In many applications, they offer distinct advantages over traditional springs.

Wave springs boast an attractive force-to-work height ratio, typically needing half the work height of coil springs for both axial and radial space savings. They also provide consistent force over a wide range of deflections, transmitting those forces only in the intended axial direction while improving dimensional tolerances. Wave springs do not suffer from torsional loading and twisting that can cause wear.

Additional benefits include increased travel distances and the ability to self-locate in bored holes and shafts, mechanical loads, stand up to corrosion, and perform in extreme temperatures to ensure safe and long lasting application performance.

## The Rotor Clip Wave Spring Advantage

- Up to 50% reduced spring height
- Axial and radial space savings
- Same or greater forces than traditional coil springs
- Same deflection
- **NO MINIMUM ORDER QUANTITY!**

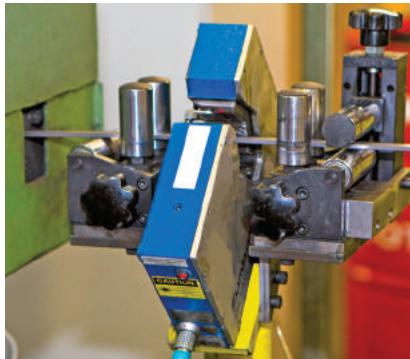

# WAVE SPRING QUALITY ASSURANCE

Controlled processes and reliable products our customers can count on.

## Quality Spotlight

### PRECISION WIRE PRODUCTION

Our laser gauges continuously control the wire dimensions during ongoing production and provide direct notification of tolerance violations providing for in-line quality assurance.

### QUALITY PRODUCTS DELIVERED FASTER

Our goal is to continuously produce and deliver high quality, precision wave springs with tight dimensional tolerances that our customers can count on.

In order to meet this goal, Rotor Clip has taken every critical production step and support process in-house. This total vertical integration allows for a very high level of quality control, process optimization, and innovation when it comes to manufacturing high performance wave springs.

### QUALITY RAW MATERIAL

We perform multi-point inspection on all incoming batches of raw wire. Our multiple wire mills with no-contact laser gauges ensure only precision wire made from carbon/stainless steel and exotic alloys with very tight tolerances is used in the production of our wave springs to ensure that products are ready to ship in a short period of time.

### CONTINUOUS QUALITY MONITORING

During production, our smart coiling machines continuously monitor tooling conditions and product output. Predictive and preventative maintenance measures tie directly to our ERP system reducing machine downtimes and production slow downs. This guarantees maximum production runs, improved Lean manufacturing efforts, reduction in raw material waste and additional quality control.

### 100% PROCESS AND QUALITY CONTROL

Rotor Clip's integrated manufacturing expertise in conjunction with our in-house quality and metrology labs ensure that our customers receive only high quality wave springs at competitive prices, delivered on time.

## CAPABILITIES AND PROCESSES

Full lot traceability on all parts.

In-house quality laboratory:

- » Spring Load Testing to 32,500lbs / 145kN
- » Simultaneous Spring Pre-setting & Load Testing with real time test results
- » Microstructure Analysis
- » Tensile Testing
- » Hardness Testing
- » Salt-Spray Testing
- » Cleanroom for Cleanliness Testing
- » Multi-point Raw Material Inspections

In-house Metrology Laboratory:

- » Surface Roughness Testing
- » Contracting
- » Dimensional Studies via Keyence System

Assembly simulation with 3D printing

Automated Machine Vision Systems for continuous dimensional checks.

## SINGLE-TURN WAVE SPRINGS

Single-turn wave springs are appropriate for a range of light to heavy duty applications with low to high thrust loads depending on design and wire type.

Single-turn wave springs are particularly suited to fit narrow radial wall dimensions and low clearances or to accommodate ball or roller bearings.

## Innovation Spotlight

PATENTED FLAT END DESIGN THAT PROTECTS MATING COMPONENTS FROM WEAR TO PROLONG APPLICATION LIFE.

Rotor Clip's patented a single-turn wave spring design protects components, such as bearings by eliminating sharp, damaging corners from the spring ends by flattening them so they rest smoothly against the mating assembly.

Flat ends make parallel contact with the outer race of the bearing.

## SST SERIES

### SINGLE-TURN, INCH

Ideal for short deflection applications with low to medium forces. Offered in a number of waves and material thicknesses. Designed for a wide range of bore and rod diameters.

**SIZE RANGE:** 0.5in - 16in

See pages 11 - 12 for full specifications.

## NST SERIES

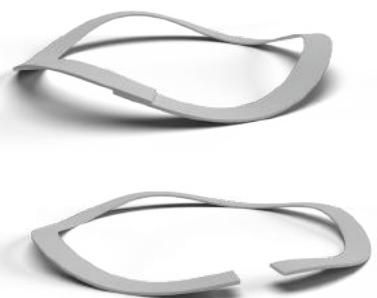

### SINGLE-TURN NARROW, INCH

Appropriate where radial space is limited, these wave springs are specified for several standard bearing diameters.

**SIZE RANGE:** 3.25in - 7.75in

See page 13 for full specifications.

## MST SERIES

### SINGLE-TURN, METRIC

Ideal for short deflection applications with low to medium forces. Offered in a number of waves and material thicknesses. Designed for a wide range of bore and rod diameters.

**SIZE RANGE:** 9mm - 580mm

See pages 15 - 16 for full specifications.

## SRT SERIES - ROUND WIRE WAVE SPRINGS

### SINGLE-TURN ROUND WIRE, INCH

Ideal for use in high load, high rate, low deflection, static, or low cycling applications. Cost effective alternative to disc springs.

**SIZE RANGE:** 0.5in - 6in

See page 14 for full specifications.

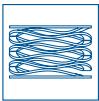

### DISC VS ROUND WIRE WAVE SPRING COMPARISON

The SRT is a single-turn wave spring coiled from round-section wire instead of the typical wave spring flat wire.

This contributes to increased and more accurate loading compared to alternative spring options like disc springs or Belleville washers, with the advantage of improved load accuracy due to greater deflection and up to 25% reduced radial cavity.

The significantly reduced section width reduces the required radial space, thus benefiting overall component size and weight which can be critical design considerations.

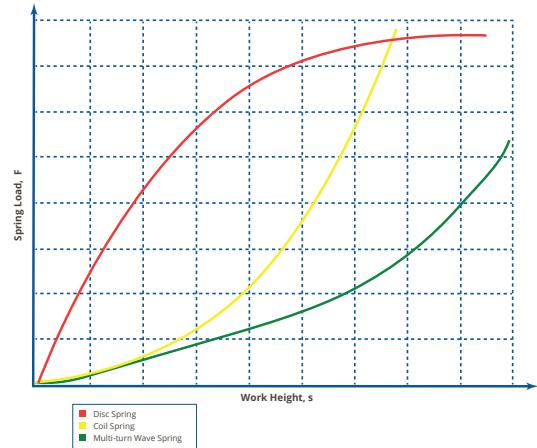

## MULTI-TURN WAVE SPRINGS

Compact and robust, multi-turn wave springs are particularly suitable for medium and heavy duty applications or designs requiring high thrust load capacity. They can accommodate a wide variety of loads, deflections and diameters. Multi-turn wave springs typically replace coiled springs or stacks of disc springs. Customers can choose plain or shim ends.

## Performance Spotlight

### PRECISE AND EVEN SPRING FORCES

In multi-turn wave springs the spring rate is reduced proportionally to the number of turns and a flat linear characteristic can be generated.

## WSL/WSM/WSR SERIES

### MULTI-TURN, INCH

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression spring while producing the same force.

**SIZE RANGE:** 0.25in - 2in

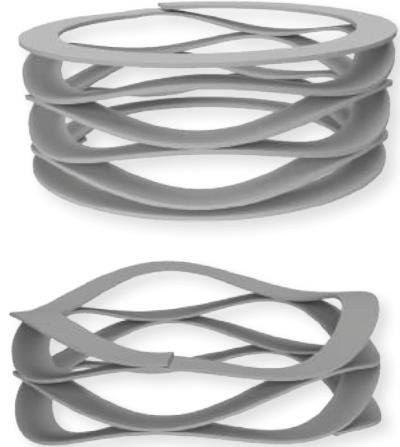

WSL = Light

WSM = Medium

WSR = Heavy

See pages 18 - 27 for full specifications.

## MWL/MWM/MWR SERIES

### MULTI-TURN, METRIC

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression spring while producing the same force.

**SIZE RANGE:** 5mm - 60mm

MWL = Light

MWM = Medium

MWR = Heavy

See pages 28 - 39 for full specifications.

## NESTED WAVE SPRINGS

### MULTI-TURN, NESTED

Nested wave springs are multi-turn wave springs with each turn coiled in parallel. This configuration produces up to three times the spring force of single-turn wave springs. The spring force increases proportionally to the number of turns.

#### SIZE RANGE:

0.118in - 25in or 3mm - 635mm

Nested wave springs can provide a higher load than a single-turn version. Although a disc spring can also handle a higher load, nested wave springs occupy less radial space and offer more travel. They also streamline assembly, requiring only one part because users do not need to stack them like single-turn designs, stamped parts or disc springs.

# COMPLETE CUSTOMER SUPPORT

Global supply with local support.

## Support Spotlight

### 3D PRINTED APPLICATIONS FOR FASTER TURNAROUND

- In-house testing for fit and function.
- Necessary Product adjustments are made immediately.
- Allows for shorter design cycles.
- Faster delivery of series ready parts to the end-user.

### WE ARE HERE FOR YOU

The Rotor Clip team is 500+ strong and supports our global customers from our US headquarters, our European production and logistics hub in the Czech Republic, as well as our strategically placed engineering, sales, and warehousing locations in the UK, Germany, Poland and China. We work very closely with our customers to provide product solutions and services that set new levels of efficiencies today and in the future.

At its core this comes down to us providing you with first class service and technical guidance to find the ring, spring, or clamp that is perfectly matched with your customer's application needs and your financial targets.

### CUSTOMER SERVICE

Rotor Clip's key to customer satisfaction is communication and the high level of service and support throughout all aspects of our business.

Our knowledgeable and dedicated customer service professionals are intimately familiar with the individual needs of our customers, providing you with fast answers and long-term solutions that address your concerns.

### ENGINEERING SUPPORT

Our technical support team provides you with the answers you seek, including:

- Assistance with Product Selection
- Identification of proper Materials, Finishes and Packaging
- Product Specifications
- Performance Data and Calculations
- In-house Testing
- Rapid Prototyping
- PPAPs

On-demand engineering support services designed around your needs!

### TECHNOLOGY SUPPORT

- EDI
- VMI Portals
- Free Access to Rotor Clip's Online Portal for easy 24/7 self service.
- Online Access to the latest product data, CAD models, and prints.
- We provide clean and up to date product data for your internal systems.

# CUSTOM WAVE SPRING DESIGN ASSISTANCE

Interested in finding out if a wave spring can empower your design?

## WE ARE HERE FOR YOU

Rotor Clip's application engineers are available to assist you with finding or developing the perfect wave spring for your individual application needs and will support you from initial concept through series production.

The easiest way to start is by filling out the included wave spring design and quote form on pages 40 and 41 or use our online wave spring calculator.

## WAVE SPRING QUOTE & DESIGN FORM

Rotor Clip offers a wide range of standard metric and inch size flat wire wave springs with one or multiple turns.

Depending on the requirements of each customer's application, we determine if there is a suitable spring available from our standard program or if a custom spring design is necessary.

Using the following selection criteria one can easily determine which spring type best meets the application requirements:

### BORE / SHAFT DIAMETER

### RADIAL GUIDE / PILOT

### LOAD SPECIFICATIONS

### CYCLE LIFE

### OPERATING CONDITIONS

### SPRING TYPE

### MATERIAL

### FINISH

### VOLUME

### DELIVERY TIME

## ONLINE WAVE SPRING CALCULATOR

The custom wave spring calculator allows the input of basic spring/application parameters and returns either a reference drawing to submit for quotation or an error message if the spring is not feasible. Design engineers should know right away if their design or application needs to be adjusted, allowing them to fine tune a nearly-finished product with your application engineer.

The calculator can be found online:

[www.rotorclip.com/wsc](http://www.rotorclip.com/wsc)

## SIZE RANGES

- Custom wave springs range from .118 - 25" or 3 - 635mm.

## STANDARD MATERIALS

- Carbon steel SAE 1060-1090 (ST)
- 17-7 Stainless Steel (SS)

## SPECIALTY MATERIAL GRADES

- Stainless - AISI 316
- Stainless - A286
- Inconel X-750
- Elgiloy
- Hastelloy C276
- Beryllium-copper
- Phosphor-bronze

## FINISHES

- Oil dip (Carbon Steel)
- Passivation (Stainless Steel)

## PACKAGING

- Shrink wrapped
- Loose bulk

# APPLICATIONS

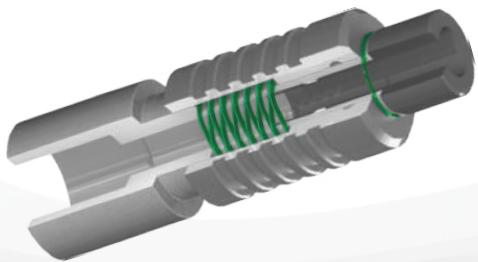

**MULTI-TURN WAVE SPRING**

in Downhole Tool

In many applications, flat wire wave springs offer significant advantages over traditional spring elements such as coil- or disc springs.

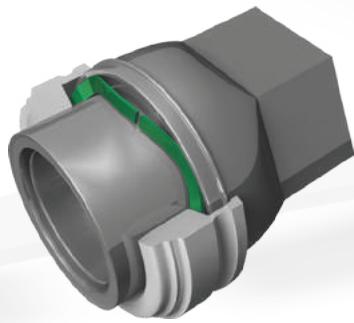

**MULTI-TURN WAVE SPRING**

in Fluid Connector

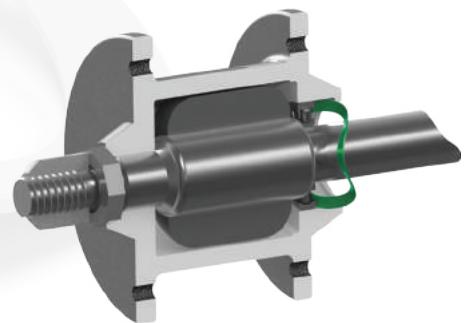

**SINGLE-TURN WAVE SPRING**

in Quick Connector

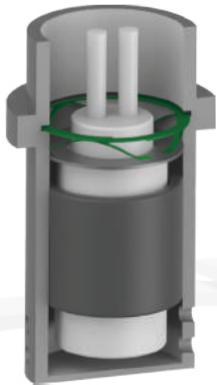

**SINGLE-TURN WAVE SPRING**

in Steering Motor

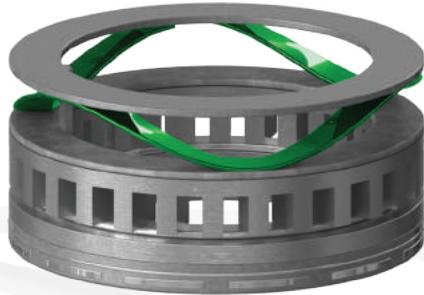

**SINGLE-TURN WAVE SPRING**

in Sensor Retention and Preload

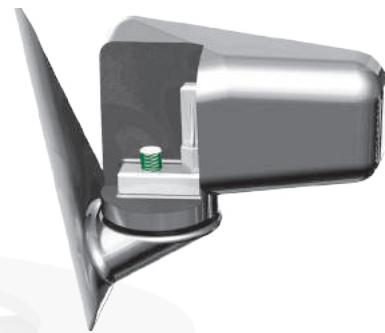

**SINGLE-TURN WAVE SPRING**

in Ultra Sonic Motor

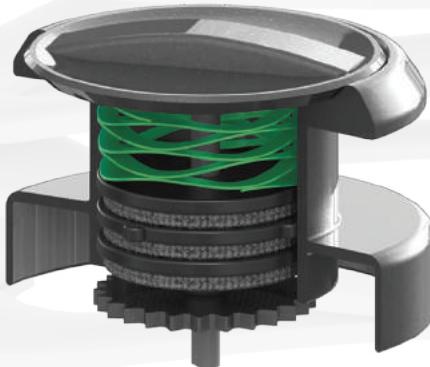

**MULTI-TURN WAVE SPRING**

in Sideview Mirror

**MULTI-TURN WAVE SPRING**

in Fishing Reel

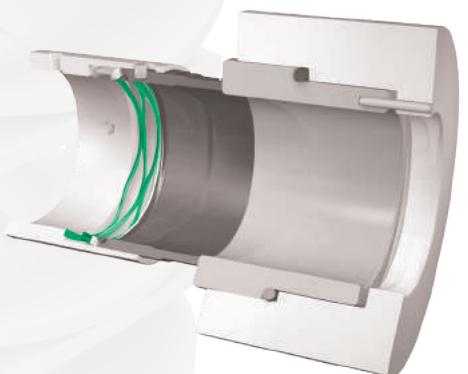

**MULTI-TURN WAVE SPRING**

in Injection Pen

**MULTI-TURN WAVE SPRING**

in Mechanical Seal

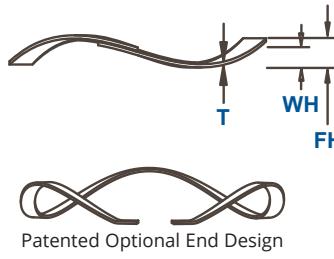

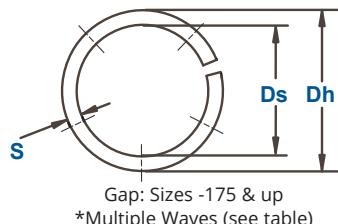

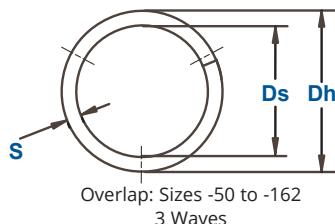

# SST WAVE SPRINGS

## PART NUMBER ANATOMY

When ordering, parts should be presented with the part number, followed by the material.  
(i.e. NST-325ST, NST-350SQ)

## Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

Special alloys available upon request.

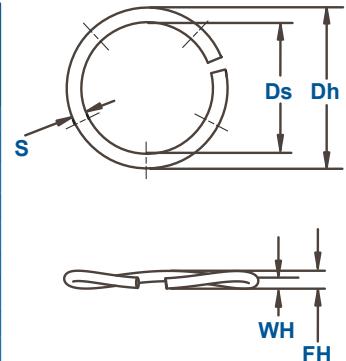

# SRT WAVE SPRINGS

## Single Turn, Round Wire, Inch

Ideal for use in high load, high rate, low deflection, static, or low cycling applications. Cost effective alternative to disc springs.

# MST BEARING INTERCHANGE CHART

This chart pairs MST metric, single turn wave springs with the appropriate standard bearing number.

The bearing preload process eliminates unwanted clearances, creates high stiffness, and reduces noise and vibration which increases bearing and application life. Wave springs provide an even load / force with small tolerances due to even, sinusoidal waves in the spring design.

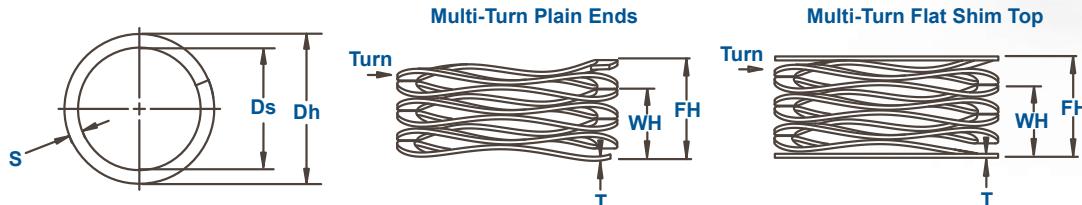

WAVE SPRING NO.	BEARING O.D. mm	BEARING NUMBERS

# WSL, WSM, WSR WAVE SPRINGS

## Multi Turn, Inch

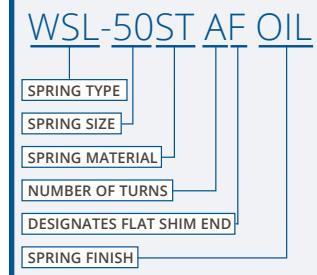

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression springs while producing the same force.

\*Not available with shim ends

## PART NUMBER ANATOMY

Part numbers shown in the table reflect multi-turn wave springs with plain ends.

The letters shown after the part numbers represent the number of turns.

When ordering, parts should be presented with the part number, followed by the material, and then the number of turns (i.e. WSL-37ST A, WSM-50ST B, WSR-75ST C, etc.)

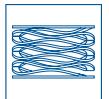

For flat shim top wave springs, add an 'F' to the end of the part number (i.e. WSL-37ST AF, WSM-50ST BF, WSR-75ST CF, etc.)

## Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

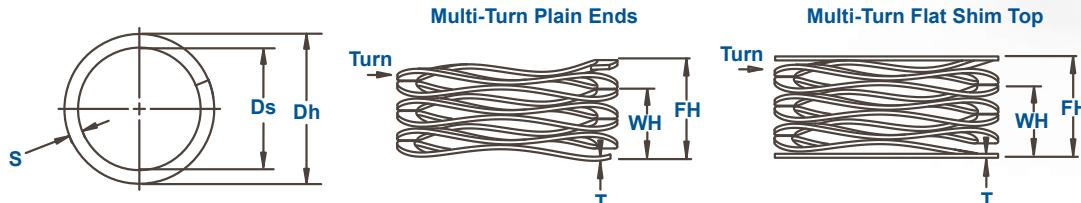

Special alloys available upon request.

Part numbers shown in the table reflect multi-turn wave springs with plain ends.

The letters shown after the part numbers represent the number of turns.

When ordering, parts should be presented with the part number, followed by the material, and then the number of turns (i.e. WSL-37ST A, WSM-50ST B, WSR-75ST C, etc.)

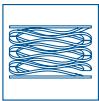

For flat shim top wave springs, add an 'F' to the end of the part number (i.e. WSL-37ST AF, WSM-50ST BF, WSR-75ST CF, etc.)

### Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

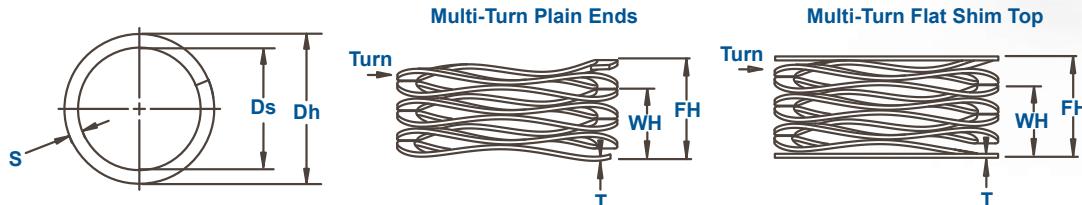

Special alloys available upon request.

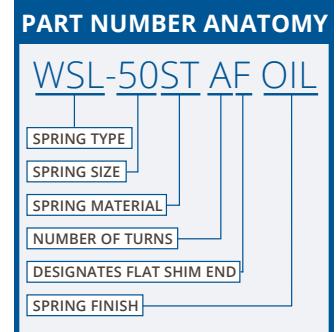

# WSL, WSM, WSR WAVE SPRINGS

## Multi Turn, Inch

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression springs while producing the same force.

## PART NUMBER ANATOMY

Part numbers shown in the table reflect multi-turn wave springs with plain ends.

The letters shown after the part numbers represent the number of turns.

When ordering, parts should be presented with the part number, followed by the material, and then the number of turns (i.e. WSL-37ST A, WSM-50ST B, WSR-75ST C, etc.)

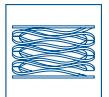

For flat shim top wave springs, add an 'F' to the end of the part number (i.e. WSL-37ST AF, WSM-50ST BF, WSR-75ST CF, etc.)

### Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

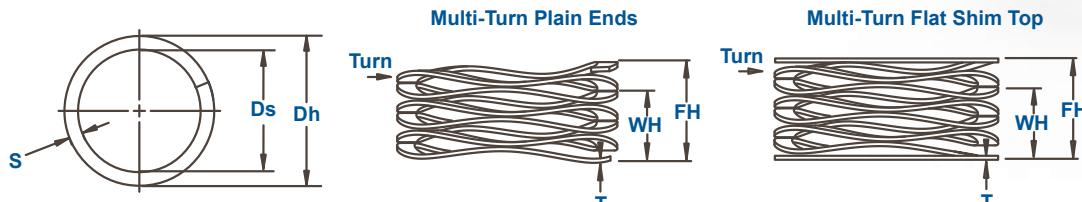

Special alloys available upon request.

# WSL, WSM, WSR WAVE SPRINGS

## Multi Turn, Inch

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression springs while producing the same force.

### PART NUMBER ANATOMY

Part numbers shown in the table reflect multi-turn wave springs with plain ends.

The letters shown after the part numbers represent the number of turns.

When ordering, parts should be presented with the part number, followed by the material, and then the number of turns (i.e. WSL-37ST A, WSM-50ST B, WSR-75ST C, etc.)

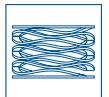

For flat shim top wave springs, add an 'F' to the end of the part number (i.e. WSL-37ST AF, WSM-50ST BF, WSR-75ST CF, etc.)

### Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

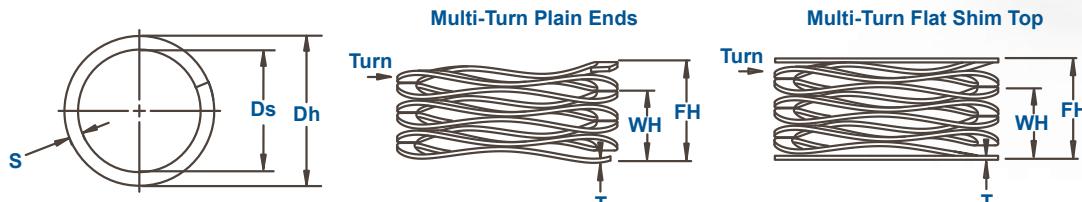

Special alloys available upon request.

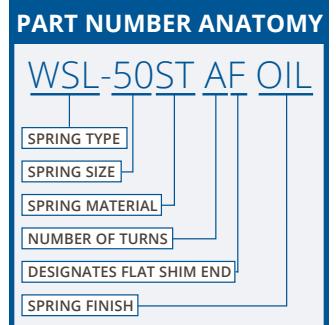

# WSL, WSM, WSR WAVE SPRINGS

## Multi Turn, Inch

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression springs while producing the same force.

## PART NUMBER ANATOMY

Part numbers shown in the table reflect multi-turn wave springs with plain ends.

The letters shown after the part numbers represent the number of turns.

When ordering, parts should be presented with the part number, followed by the material, and then the number of turns (i.e. MWL-5ST A, MWM-20ST B, MWR-25ST C, etc.)

For flat shim top wave springs, add an 'F' to the end of the part number (i.e. MWL-6ST AF, MWM-20ST BF, MWR-25ST CF, etc.)

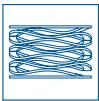

## Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

Special alloys available upon request.

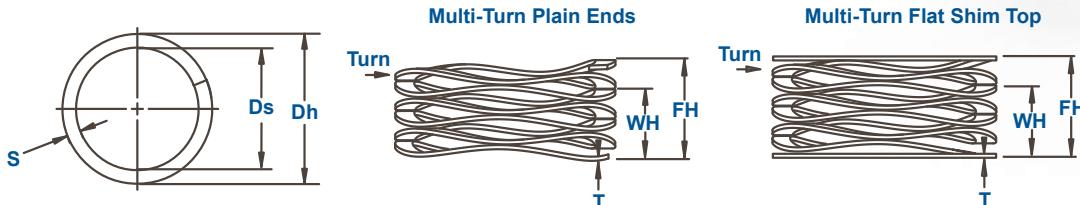

ALL DIMENSIONS IN MILLIMETERS  
UNLESS OTHERWISE SPECIFIED.

# MWL, MWM, MWR WAVE SPRINGS

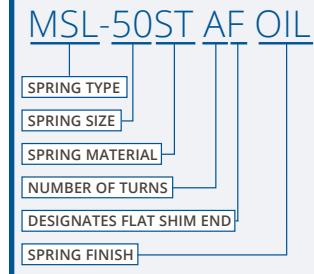

## Multi Turn, Metric

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression springs while producing the same force.

Part numbers shown in the table reflect multi-turn wave springs with plain ends.

The letters shown after the part numbers represent the number of turns.

When ordering, parts should be presented with the part number, followed by the material, and then the number of turns (i.e. MWL-5ST A, MWM-20ST B, MWR-25ST C, etc.)

For flat shim top wave springs, add an 'F' to the end of the part number (i.e. MWL-6ST AF, MWM-20ST BF, MWR-25ST CF, etc.)

### Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

Special alloys available upon request.

Part numbers shown in the table reflect multi-turn wave springs with plain ends.

The letters shown after the part numbers represent the number of turns.

When ordering, parts should be presented with the part number, followed by the material, and then the number of turns (i.e. MWL-5ST A, MWM-20ST B, MWR-25ST C, etc.)

For flat shim top wave springs, add an 'F' to the end of the part number (i.e. MWL-6ST AF, MWM-20ST BF, MWR-25ST CF, etc.)

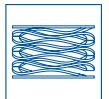

### Standard Material Codes:

ST = carbon steel.

SQ = 17-7 PH/C stainless steel.

Special alloys available upon request.

**ALL DIMENSIONS IN MILLIMETERS  
UNLESS OTHERWISE SPECIFIED.**

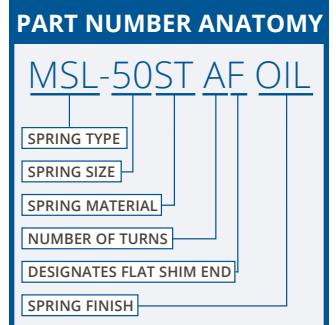

# MWL, MWM, MWR WAVE SPRINGS

## Multi Turn, Metric

Used for low to medium force applications with greater travel compared to single-turn springs. Utilizes nearly half the space as helical compression springs while producing the same force.

# WAVE SPRING QUOTE & DESIGN FORM

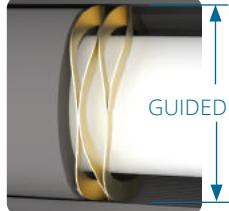

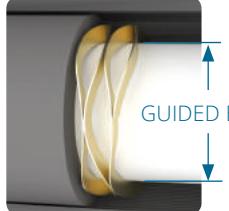

As soon as a standard catalogue item cannot be considered for your application, Rotor Clip can offer custom designed wave springs without expensive tooling costs and with regards to your specification criteria. Please fill out this form and send it to the Rotor Clip engineering department (Fax: +1-732-805-6474, E-Mail: tech@rotorclip.com) which will check a feasible wave spring design with regards to your specifications.

## CONTACT INFORMATION

Name:	Date:
Company:	Department:
Street:	City:
Postal Code / ZIP:	Country:
Phone:	Fax:
	Email:

## Radial Guide / Pilot

A multi turn flat wire wave spring has to be guided/piloted radially in order to avoid skipping of the turns.  
Please indicate a radial guide:

Bore Diameter: <input type="checkbox"/> [mm] <input type="checkbox"/> [inch]	Shaft Diameter: <input type="checkbox"/> [mm] <input type="checkbox"/> [inch]
<input type="checkbox"/> Pilots and Operates in Bore Diameter <input type="checkbox"/> Pilots Over and Clears Shaft Diameter <input type="checkbox"/> Clings in Bore Diameter* <input type="checkbox"/> Clings on Shaft Diameter	 

\*For Single Turn Wave Springs only

## Load Specifications

Please define the load(s) required at given work height(s). Values in: <input type="checkbox"/> [N] and [mm] or <input type="checkbox"/> [lbs] and [inch]	
<b>Static Application</b>	<b>Dynamic Application/ Endplay Take-up</b>
Load (Min. / Max.) at Work Height	Load 1 (Min. / Max.) at 1. Work Height
	Load 2 (Min. / Max.) at 2. Work Height
Free Height: <input type="checkbox"/> min. <input type="checkbox"/> max.	

## Cycle Life

Please specify the required cycle life:		
<input type="checkbox"/> Static Application	<input type="checkbox"/> $10^5$ Cycles	<input type="checkbox"/> $> 10^6$ Cycles
<input type="checkbox"/> $< 10^4$ Cycles	<input type="checkbox"/> $10^6$ Cycles	

## Operating Conditions

Please define under which conditions the wave spring is expected to operate:	
Max. Temperature:	°C / °F
The spring will be in contact with:	

# WAVE SPRING QUOTE & DESIGN FORM

Type							
One turn with gap <input type="checkbox"/>	One turn with surface-friendly flat ends <input type="checkbox"/>	One turn with overlapping ends <input type="checkbox"/>	One turn round wire with gap <input type="checkbox"/>	Multiple turns with plain ends <input type="checkbox"/>	Multiple turns with parallel ends <input type="checkbox"/>	Multiple Nested Turns <input type="checkbox"/>	

## Material (Standard)

- Carbon Spring Steel (SAE 1070 – 1090)       17-7PH Condition CH900 Stainless  
(DIN Material No.: 1.4568)

## Special Grades

- AISI 302 Stainless (DIN Material No.: 1.4319)       Elgiloy (DIN Material No.: 2.4711)  
 AISI 316 Stainless (DIN Material No.: 1.4401)       Hastelloy C276 (DIN Material No.: 2.4819)  
 A286 (DIN Material No.: 1.4980)       Beryllium-Copper (DIN Material No.: 2.1247)  
 Inconel X-750 (DIN Material No.: 2.4669)       Phosphor-Bronze (DIN Material No.: 2.1030)

## Finish

What is the finish requirement of your application:

- Oiled (Standard with Carbon Spring Steel)       Vibratory Finishing       Electropolish  
 Degreased & Ultrasonic-Cleaned (Stainless Steel)       Black Oxide      with \_\_\_\_\_ µm abrasion rate  
 Passivation       Deburred       Other: \_\_\_\_\_

Volume	Delivery Time
